Outsourcing Data Destruction

A Recipe for Data Breaches and Disaster

In today's hyper-connected world, data is the lifeblood of organisations. From customer records and financial data to intellectual property and confidential business plans, sensitive information is the cornerstone of operations and competitive advantage. However, with this wealth of data comes immense responsibility – the duty to protect it from unauthorized access, breaches, and potential misuse.

Data breaches have become a stark reality, causing irreparable damage to corporate reputations, financial losses, and legal repercussions. Organizations that fail to adequately safeguard their data risk not only losing the trust of their customers, partners, and employees but also inviting costly lawsuits and regulatory penalties.

The Threat of Outsourcing Data Destruction

Outsourcing data destruction may seem like a convenient and cost-effective option, but it comes at the expense of security, control, and compliance. By entrusting your sensitive data to external parties, you open yourself up to a host of risks, including:

Chain of Custody Risks

Once data leaves your premises, it enters a complex chain of custody, involving multiple intermediaries and transportation. This increases the risk of mishandling, loss, or unauthorised access.

Data Breaches

Third-party data destruction services are not immune to cyberattacks. Data breaches can occur during data transportation, storage, or destruction, exposing sensitive information to unauthorised parties.

Limited Oversight

Relying on third-party services creates a blind spot in your organization's security posture. With limited visibility into the data destruction process, you cannot verify its effectiveness or ensure compliance with your data privacy policies.

Potential Liability

In the event of a data breach, your organization could face legal liability and reputational damage. You could be held responsible for the actions of a third party, even if you had no direct involvement in the breach.

Morgan Stanley Data Breach

Morgan Stanley faced a significant data breach, exposing the personal information of millions of its customers. The breach was caused by a third-party vendor. This incident highlights the risks associated with outsourcing data destruction.

Outsourcing data destruction may seem like a convenient and cost-effective option, but it comes at the expense of security, control, and compliance. By entrusting your sensitive data to external parties, you open yourself up to a host of risks, including →

ForgeRock 3rd Party Risks

According to the ForgeRock 2023 Identity Breach Report, in 2022, 34% of data breaches originated from third-party vendors. This highlights the importance of carefully vetting third-party vendors and ensuring that they have robust security measures in place.

3rd-Party Data Breaches

A recent study found that third-party data breaches increased by 134% in 2022 and now account for 50% of all data breaches. This alarming trend underscores the growing threat posed by third-party vendors and the importance of taking proactive measures to protect your organisation's data.

The DSS Mobile

Reclaim Control, Protect Your Data

The DSS Mobile is a revolutionary in-house data destruction solution that empowers organisations to safeguard their sensitive data and regain control over the destruction process. With its advanced security features, comprehensive data destruction capabilities, and verifiable reporting, the DSS Mobile ensures that your organisation's data is handled securely and responsibly

Advanced Security Features

Automated Device Identification and Method Selection

The DSS Mobile intelligently identifies the type of storage device and selects the appropriate data destruction method, guaranteeing complete data erasure.

Smart Data Destruction Engine

The DSS Mobile Smart Wipe Engine harnesses sophisticated automated procedures to guarantee NIST 800-88 conformity, eradicating every vestige of sensitive data.

NIST Compliance

The DSS Mobile adheres to strict NIST data destruction standards, including Clear & Purge that renders target data recovery infeasible.

NIST 800-88 Product Assurance

The DSS Mobile has been certified by independent certification body ADISA, on its Product Assurance Scheme to verify compliance with NIST 800-88.

Unparalleled Efficiency

Smart Wipe Technology

The DSS Mobile utilises bespoke Smart Wipe Technology to significantly reduce data destruction times, making it ideal for organisations with high data volumes.

Parallel Processing

The DSS Mobile's parallel processing capabilities allow multiple data destruction tasks to be processed simultaneously, maximising efficiency.

Lightning-Fast Data Destruction

The DSS Mobile's unique smart wipe engine empowers organisations to eliminate data from most modern storage devices in seconds, not hours.

Ease of Use

User-Friendly Interface

The DSS Mobile's intuitive and user-friendly interface makes it simple to operate, eliminating the need for extensive training.

Detailed Reporting

The DSS Mobile generates comprehensive reports, providing verifiable evidence of data destruction and ensuring compliance audits and regulatory requirements.

Remote Monitoring

The DSS Mobile can be monitored remotely, allowing administrators to oversee the data destruction process from anywhere.

ESG and CSR Benefits

Reduces the environmental impact of data disposal by eliminating the need for transportation to third-party facilities

Protects sensitive data from unauthorized access, ensuring compliance with data privacy regulations.

Contributes to a more sustainable business model by reducing reliance on external vendors.

Enables responsible donation of used equipment to charities and organisations in need, extending the lifespan of electronic devices and helping others.

Safeguard Your Data Protect Your Reputation

With the DSS Mobile, you can safeguard your sensitive data, protect your organisation's reputation, and maintain compliance with data privacy regulations.

Contact us today to learn more about how the DSS Mobile can revolutionise your data destruction strategy.
